## 1. Functional Description

GNSSRK-D-RDV8 is a repeater operates by receiving GPS/Beidou2satellite signals with an antenna located outside the building and re-radiating the signals into the indoor area or covered space where satellite signal cannot reach.

GNSSRK-D-RDV8 is a single point GPS/Beidou2 repeater, one transmitting antenna transmit GP/Beidou2 signal. This solution offer adjustable test signal to receiver.

If need extend the system, you can add assemblies and sending antennas, so as to cover satellite signal indoor large area and more rooms or buildings.

## 6. Typical faults and solutions

GNSS repeater GNSSRK-D-RDV8 fault location and remove:

First: To determine whether the RGA30-DV8 power supply connected, through the RGA30-DV digital display can be observed to lose whether there is voltage output, such as digital display shows a voltage of about 5V, indicating normal power supply, RGA30-DV work properly. Otherwise, check the power outlet for good contact.

Second: If the digital stepper is adjustable, the input port of the amplifier has a voltage of 5V, you need to check whether the fixing is steady between GRA10 and the cable.

Third: If the below two step were ok, please check the outdoor antenna TIMING4200 .You can, check the voltage between axis of the cable connector and the outer shielding layer to make sure it's 5V.If no voltage, the circuit has fault, please contact our technical support. If 5V,the antenna TIMING4200 can be suspected.(In fact, this case hasn't appear in our engineering projects.
